The ZIVE BP2A, a dual channel potentiostat/galvanostat/FRA, is to support dual-working-electrode cell with one reference and one counter electrode configuration(bi-potentiostat) for sample characterization. Each channel can conduct DC and impedance test simultaneously and/or independently. The ZIVE BP2A can be setup to run 2-, 3-, or 4-electrode measurements with a simple setup change.

Each channel is designed under FPGA(Field Programmable Gate Array) and DSP(Digital Signal Processor) control with high speed capability.

DAC Control
 : Two sets of high speed 16bit DAC(50MHz) for offset & scanning & one set of 16bit DAC(1MHz) for auxiliary analog output control

ADC Reading
 : Two sets of 16 bit 500kHz ADC for reading voltage/current and 4 channel 16bit 250kHz ADCs for auxiliary data input such as temperature, auxiliary voltage etc. It provides high frequency EIS, fast pulse techniques and high speed sampling time.

The ZIVE BP2A's each channel is equipped with a frequency response analyzer(FRA) as standard and it provides high performance impedance measurements over the frequency range 10uHz to 1MHz. ZRA(zero resistance ammeter) function can measure max. 2 Amp in galvanic corrosion technique. The system is supplied with four(4) advanced software packages, which are catagorized by application fields. With this advanced software packages, user can widen ZIVE BP2A's flexibility.

System Features

- Versatile high quality dual channel potentiostat/galvanostat/impedance analyzer
- Dual channel potentiostat
  - two fully independent channels
  - dual working electrodes with one reference and one counter electrode configuration available
- FRA function to control an external electronic load or 3rd party potentiostat/galvanostat is available as standard
- 14 EIS techniques capability including multisine
- Current interrupt IR measurement
  IR compensation(dynamic, positive feedback)
- Bipolar pulse capability
- Voltage pulse or current pulse charge/discharge test(GSM,CDMA etc.), sine wave function for ripple simulation in battery test package and pulse plating available
- High speed data sampling time per channel
  - 50usec/sample in burst mode
  - 2usec/sample in fast mode
  - 1msec/sample in normal mode
- Fast sweep mode(5000V/sec with 10mV data sampling)
- 3 measurement/control voltage ranges & 12 measurement/control current ranges
- Internal 295,000 data point storage and continuing experiment regardless of PC failure
- Full software packages are included as standard
  - Corrosion test software package(COR)
  - EIS test software package(EIS)
  - Electrochemical analysis software package(EAS)
  - Energy software package(BAT)
- Multichannel configuration available
- Free software upgrade

Hardware Features

- Compact design
- Wide current ranges(2A to 20pA) for various applications (200pA and 20pA ranges are with gain)
- Independent operation by FPGA with DSP per channel
- Impedance measurement capability on each channel with built-in FRA
- Smart LCD display for each channel
- Simultaneous 3 auxiliary voltage measurements
- Temperature measurement as standard
- 1 auxiliary analog output
- 3 digital outputs & 2 digital inputs
- Multichannel configuration available
- External booster(ZB series) interface
- External multiplexer(MUX series) interface for a sequential measurements on multiple electrochemical cells

Versatility

The ZIVE BP2A's system comes with additional three analog inputs (auxiliary voltage input) and 1 analog output along with 3 digital outputs and 2 digital inputs, and one temperature input for K type thermocouple. It will help users expand the usage of the instrument.

For example,

1. User can measure the voltage between working and reference electrode and, by using 2 additional analog inputs(auxiliary voltage input), user can also measure the voltage between reference and counter electrode and between working and counter electrode as well.

2. With analog output, the system can control rotating speed of the rotator, MFC flow rate etc. by ±10V full scale.

3. User can control on/off of max. 3 devices by DO etc.

4. This ZIVE BP2A can interface with an external booster(ZB series) for high current application.

Safety and Maintenance

1. Even though the communication failure occurs between PC and ZIVE BP2A, the system continues its experiment on channel and saves the data into ZIVE memory up to 295,000 data point set. After the communication is restored, ZIVE will transfer saved data to PC automatically or user can transfer data when he/she wants. This function will be highly efficient for long time experiment.

2. User can define a safety condition setting by inputting his/her own safety levels for voltage, current, temperature etc. If the measurement value exceeds this setting value, the system will automatically stop to protect the system and cell.

3. If the control value of voltage or current is different from measured value, the experiment will stop automatically to protect the cell.

4. Automatic calibration function is available for user calibration.

5. The system has its own hardware parameters and calibration data.

6. The channels feature plug-n-play setup for easy installation and removal.

7. The system is controlled from a PC via USB.

Application

The ZIVE BP2A, a dual channel electrochemical workstation is ideal for fundamental research in electrochemistry, development and quality assurance of new sensors, corrosion/coatings, electrode material, membrane, conducting polymer, evaluation power device research such as battery materials, fuel cells, super capacitors and solar cells.
■ Batteries

The system is very well adapted for researches on the cycling behavior of battery. It provides various control modes for battery cycling. It can support EVS (electrochemical voltage spectroscopy)/GITT/PITT test. Fast pulse capability for GSM, CDMA test is included in battery test software package. Pulse profile measurement function to check pulse shape is available. For ripple simulation test, sine wave charging/discharging is available.

■ Corrosion

The system is suitable for measuring low corrosion rates and EIS test to evaluate corrosion. The ZRA function is supplied for galvanic corrosion measurement.

■ Sensors

The ZIVE BP2A can be used for sensor research using with DNA chips or screen printed electrodes. System's minimum current range is 20pA(with gain). Cyclic voltammetry, Chronoamperometry and EIS measurement can be used for this application. FET sensor application can be supported too.

■ General Electrochemistry
The ZIVE BP2A is also suitable for the development of bio-research, electron transfer kinetic studies and electrochemical analysis of compounds at low trace levels, where multichannel DC and impedance analysis is beneficial in providing high throughput of results.

■ Fuel Cells

The ZIVE BP2A is ideal for characterizing the fuel cells and anodic/cathodic process mechanism at development and research grade. This system can be directly used for PEMFC, DMFC, and DEFC etc. The FRA can control an external electronic load for EIS measurement of fuel cell. I-V curve measurements in a full range of available current(autorange option is active during the I-V scan in order to ensure measurement with continuously high resolution).

■ Super Capacitors

The ZIVE BP2A has fast potentiostat circuit with high speed data acquisition (50usec/point, burst mode). This function is well applicable to super capacitor testing. Charging/discharging capability is used for this application.

■ Solar Cells
Solar cell development and production requires extensive material and device testing to improve efficiency and match individual cells for panel construction. The ZIVE BP2A is the best solution for photovoltaic cell characterization. With system's AI, AO, DI, and DO, the system can monitor other device's signal and also control them.

Main Software SM

The Smart Manager (SM) is to control ZIVE BP2A model and it provides user defined sequential test by using sequence file, technique menu and batch file. The batch file allows the users to do a serial test by combining sequence files and/or technique files.

The SM software is easy to use and supports various electrochemical experiments including functions of system control, schedule file editor, real time graph, analysis graph, user calibration, and data file treatment etc.

Strip Chart

Strip chart recorder function provides real graph function independently. You can monitor 2 Y axis data such as voltage, current, AuxV1,2,3, temperature, power, capacity etc. in real time and can select channel(s) which you want to monitor. You can also set max. data point for showing strip chart length.
Simple Monitor
This display window is for monitor the major data values and channel status for multiple channel operation.

Control & Real Time Graph

Smart Manager provides 2 kinds of control & data acquisition with real time graph.

Dual channel control panel

Dual channel real time graph
Dual channel data monitor (EIS data/DC data selectable)

User can control and monitor for specific channel in details and he/she can monitor data in VOI(value of interest) window and channel status in one window. Real time graph's X ,Y axis format will be changed per technique automatically. It can be defined by user's demand per technique.

For experiment using sequence file or batch file, user can designate X,Y parameter on three different real time graph. The real time graph's format can be also selected. The channel number which you control can be changed in this window. Even if you control the channel in this mode, you can also monitor and control the same channel in this control panel at same time.

The real time graph and VOI will be changed depending on DC test or impedance test automatically. The virtual control panel always displays the graph for recent test result. For impedance measurement, wave monitor will be displayed on real time graph to check wave's quality. This monitor can be switched to Lissajous(I vs. E) plot.

Graph

Smart Manager's graph function is to simplify the operation. There are 3 kinds of graph per each experiment. You can change X, Y1, Y2, Y3, Y4 axis parameter as you want. Each graph provides shortcut buttons. When you click these buttons, the format of the graph will be changed accordingly.
In DC and Cycle graph, whenever you click or , the parameters which are related to current such as current, capacity, energy, power, load, etc., will be changed into calculated specific value or density value, respectively.
